

Prime Time Technique (Time Management)

What is Prime Time?

Your Prime Time is the part of the day when your energy, focus, and productivity are at their highest.

Examples

- Some people work best in the morning (7 AM–11 AM).
- Others are most productive in the evening or at night.

How does the technique work?

1. Identify when you feel most alert and focused.
2. Schedule your most important or difficult tasks during that time.
3. Leave easier tasks for lower-energy periods.

Example for Students

If your Prime Time is 9 AM–12 PM, use that period for difficult subjects, numerical problems, assignments, and projects. Use other times for routine tasks.
